

Aesthet Acne Gel - Acne treatment with micronized benzoyl peroxide

30g, code 807

clinically proven advanced aesthetic skin care treatments • tested and recommended by Dermatologists

Aesthet Acne Gel is an effective acne treatment which contains micronized benzoyl peroxide (5g per 100g) in an aqueous gel. Benzoyl peroxide (BPO) is a first-line treatment for mild and moderate acne. Although the mechanism action of BPO is not completely understood, it is thought to work by generating free radicals. These free radicals kill *Propionibacterium acnes*, the bacteria that causes acne, by interacting with their cell walls. Benzoyl peroxide also has a mild keratolytic effect that keeps the pores clean, preventing them from getting clogged, this helps avoid breakouts. Additionally, BPO is effective by reducing comedones and skin's inflammation. As much as BPO is useful in the management of mild to moderate acne it also often causes dryness of the skin, slight redness and occasionally peeling when side effects occur. One of the reasons for this is that benzoyl peroxide molecules are larger than the average human pore (50 microns). This can lead to decreased efficiency and skin irritations. Unique and advanced Aesthet Acne Gel formula contains specially milled and patented benzoyl peroxide particles that are smaller than 10 microns. These small particles allow the product to penetrate the pores more quickly and efficiently to eliminate the *Propionibacterium acnes* bacteria with less skin irritation. This effective acne treatment with micronized benzoyl peroxide works immediately to kill acne causing bacteria, prevents breakouts and reduce redness and inflammation.

In addition to micronized benzoyl peroxide, Aesthet Acne Gel formulation contains a natural amino acid L-Lysine aspartate. It boosts cell energy metabolism as well as drains and detoxifies the skin tissue. A unique Teflose® polysaccharide obtained by bacterial fermentation with a high content of rhamnose, glucose and glucuronic acid inhibits the adhesion of undesirable pathogenic bacteria on the skin surface. A blend of Terpinen-4-ol obtained by fractional distillation of tea tree oil (*Melaleuca alternifolia*) and Willow Extract, enriched with salicylic derivatives, provides an effective anti-acne, anti-irritant and keratolytic action while additional polysaccharides in the formula help to soothe and moisturise the skin.

You can expect a visible improvement in the appearance of acne between six and eight weeks after starting to use Aesthet Acne Gel.

Contraindications: Hypersensitivity to any of the components of Aesthet Acne Gel.

FOR EXTERNAL USE ONLY. Avoid contact with the eyes, eyelids and lips. If accidental contact occurs, rinse with water. Avoid contact with any material including fabric and hair as it may result in discoloration.

The safe use of Aesthet Acne Gel has not been established in pregnancy, lactation or childhood.

How to use Aesthet Acne Gel:

- Aesthet Acne Gel should be applied once or twice daily, cover affected areas after washing with mild cleanser and water.
- On first application it is recommended to wash the Aesthet Acne Gel off after a few hours, then gradually increase the length of time you leave the gel on your skin. Once your skin is used to the gel you can apply twice a day and leave it on.
- As you apply Aesthet Acne Gel, avoid sensitive areas of your skin, around your nostrils, eyes and mouth. Do not apply it to any areas of skin which are irritated or sensitive.
- If your skin becomes very dry, it may help to use a moisturising cream (preferably DermaPlex Dry/

Sensitive skin moisturiser which is fragrance-free and light).

- Aesthet Acne Gel can cause bleaching of hair and dyed fabrics.
- Commonly, benzoyl peroxide can cause some individuals' skin to become more sensitive to sunlight than normal. Use a sunscreen with a high sun protection factor (DNA•EPINEW Sunscreen SPF30 is recommended). Do not use sunbeds.
- Continue with the treatment for at least six to eight weeks to see optimal results. The most common reason for treatment failure is giving up too soon, assuming that the product is not working. If, however, your skin has not improved after two months, make an appointment to speak with your doctor who will

advise you about other suitable acne treatments for you to try.

- Once your acne lesions have cleared, acne commonly flares up again if you stop treatment altogether. It is recommended to continue with a maintenance treatment: one application every other day of Aesthet Acne Gel.

Side effects:

Allergic contact dermatitis and dryness might occur while using Aesthet Acne Gel. If severe irritation develops, discontinue use and consult a doctor. After the reaction has ceased Aesthet Acne Gel can be used again with less frequent applications.
