

AESTHET MESO-COCKTAILS FOR PROFESSIONAL MESO FACIAL AND BODY APPLICATIONS

AESTHET AGEING INHIBITOR

slows down premature ageing
for professional mesotherapy¹

reduces wrinkles & rejuvenation

Aesthet - clinically proven advanced aesthetic skin care treatments
• tested and recommended by Dermatologists

Aesthet Ageing Inhibitor meso-cocktail is a highly effective bio-stimulant containing plant-derived Epidermal Growth Factor (plant-EGF), a protein involved in the regeneration of the extracellular matrix. It has been obtained by using a plant-based bio-factory for the transient expression of high purity proteins in a non-GM system. Plant-EGF activates the protein synthesis and cellular regeneration, takes a significant role in skin regeneration, and repairs the extracellular matrix in the aging skin.

The meso-cocktail also contains BOT-XINE, a Botulinum toxin -like hexapeptide that has been shown to diminish expression lines. It works in the pre-and post-synaptic pathways through SNARE protein. Clinical studies showed that BOT-XINE hexapeptide reduces the wrinkle volume up to 50% in 14 days.

Sugar-derived hydrating complex in the formula and Hyaluronic acid both effective moisturizers that smooth and plump the skin. Phyto-Peptidic Fractions™ (PPF) from Centella Asiatica, a well-known plant for its anti-oxidant, soothing, repair and adaptogenic properties is the concentrated secretome of plant stem cells that is rich in signaling peptides and plant growth factors specially designed to slow the skin aging process.

Aesthet Aging Inhibitor meso-cocktail is an innovative and effective anti-aging skin treatment that improves skin firmness, elasticity and provides a visible anti-wrinkle effect.

Recommended for:

The treatment of wrinkles, eye contouring, and as a defective anti-aging therapy.

Application method:

Professional facial and body meso applications by aesthetic practitioners.

Contraindications for Aesthet Ageing Inhibitor:

Hypersensitivity to any of the components of Aesthet Ageing Inhibitor.

Professional and External Use Only

5 X 10ml, code 816

¹In line with cosmetic treatments, Mesotherapy refers to virtual mesotherapy where the active ingredients passes into the dermal layers via electro diffusion.

AESTHET LUMINE ENHANCER

reduces pigmentaton & dark spots
for professional meso applications¹

Aesthet - clinically proven advanced aesthetic skin care treatments
• tested and recommended by Dermatologists

Aesthet Lumine Enhancer meso-cocktail is a professional treatment that reduces pigmentation and dark spots on the skin. It contains a complex of a synthetic molecule BRIGHT-CHROM, an effective antioxidant. BRIGHT-CHROM helps to avoid skin damage from UV-radiation.

Clinical studies have demonstrated that BRIGHT-CHROM visibly improves the appearance of pigmented skin areas and reduces these by 26-50% after 30 days and by 51-75% after 60 days. The Aesthet Lumine Enhance also contains Plasma Rich in Cell Factors™ (PRCF) from the Punica Granatum, an effective multistep brightening active. It has an exceptional antioxidant activity associated with its rich content in polyphenolics. PRCF from Punica Granatum seed stem cells are enriched in characteristic hydroxybenzoic acids and are standardized in gallotannins (gallic acid) and ellagitannins (ellagic acid), the major antioxidants in pomegranate. PRCF from Punica Granatum has been shown to play a central role in reduction of skin discoloration acting on the main keys of melanogenesis pathways. Arabian Cotton Plasma Rich in Cell Factors™ (PRCF) is another active ingredient in the meso-cocktail. It is a lysate derived from the cultured plant stem cells of Gossypium herbaceum. Arabian Cotton PRCF is enriched and standardized in a Phyto-complex of polyphenolics from the plant. It accelerates the repair of photo-damage caused by solar radiation on the skin.

The synergic effect of multi-step brightening actives helps to reduce the melanogenesis and minimize the appearance of the pigmented areas and spots. The Lumine Enhancer meso-cocktail stimulates skin regeneration and improves the skin's brightness and luminosity.

Recommended for:

Treatment of Hyper pigmented areas, Age Spots, Sun Damage.

Application method:

Professional facial and body meso applications by aesthetic practitioners.

Contraindications for Aesthet Lumine Enhancer:

Hypersensitivity to any of the components of Aesthet Lumine Enhancer.

Professional and External Use Only

5 X 10ml vials, code 817

AESTHET RESHAPE TRANSMUTER

contour & redefines skin tissue
for professional mesotherapy¹
meso facial and body applications

Aesthet - clinically proven advanced aesthetic skin care treatments
• tested and recommended by Dermatologists

Aesthet ReShape Transmuter meso-cocktail is a unique remodeling solution to liposculpture the facial and body contour by reducing fat and sagging while tightening and redefining the skin. It contains Plasma Rich in Cell Factors™ (PRCF) from S Crassifolia Callus Lysate, which stimulates fat mobilization and regenerates the dermal fibers. Plasma Rich in Cell Factors™ (PRCF) from S Crassifolia Callus Lysate, a metabolome containing fumaric acid esters, responsible for skin regeneration, and isoquinoline alkaloids, responsible for the enhancement of lipolysis. PRCF from S. Crassifolia uses energy and extra-cellular communication to protect the tissue and increase its firmness and elasticity.

Clinical tests have shown that PRCF from S. Crassifolia helps to significantly reduce facial sagging up to - 18%, up to 14% & 12% increase of facial & body firmness as well as an effective reduction of the thigh perimeter up to 5,6cm. UP-LIVITY synthetic tetra-peptide in the meso-cocktail provides firmness to the skin by enhancing the proper assembly of elastin and increases the gene expression of several types of collagen, other proteins, and integrins, leading to improve resistance against gravity and aging. UP-LIVITY peptide enhances lifting and reshaping of the tissue as well as increasing elastin synthesis by 22% and collagen by 43%. Plasma Rich in Cell Factors™ (PRCF) from Daucus Carota Sativa Root Cell Culture Lysate has a synergic effect in Aesthet ReShape Transmuter meso-cocktail. It contains polyphenolic antioxidant compounds that assist in skin regeneration.

Aesthet ReShape Transmuter meso-cocktail helps to liposculpture the facial and body contour while tightening and redefining the skin.

Recommended for:

Facial contour remodelling, anti-sagging, body slimming, facial and body sculpturing.

Application method:

Professional facial and body meso applications and virtual mesotherapy by aesthetic practitioners.

Contraindications for Aesthet ReShape Transmuter:

Hypersensitivity to any of the components of Aesthet ReShape Transmuter.

Professional and External Use Only

5 X 10ml vials, code 818
